

## Homework 2 - polymorphism and encapsulation

This homework uses the programs in hw2PolyJava.tar.

**Question 1:** Take the programs in the above file and make them compile. The compile errors should all be related to whether or not fields and methods are visible to inheriting or using classes.

**Question 2:** For each of program, and for each print statement in the main routine, tell which class' functions are called in that statement.

Place your java file and a txt or pdf file with the answers to question 2 in a directory called <first name>.<last name> and upload it to blackboard.
